

Models Affected: 3100
Effective Date: Immediately

Notification Number: 0720-1
Notification Date: 07/15/2020

Acting upon customer feedback, our EarthWay development team implemented the following improvements to the 40lb chest spreader.

NEW FEATURES

1. Updated harness assembly now has a more comfortable fit by integrating quick release luggage type clips in place of the previous spring steel clips. The new clips are easier on your hands to attach and detach and will not corrode over time. The new harness includes backpack type pull down adjustment straps to make it faster for different users to adjust the straps for a snug, comfort fit.
2. Updated EarthWay landmark is now applied to the hopper.
3. To be environmentally friendly and save paper, the spreader operational manual and settings are available online. Each spreader includes a “Going Green” tag with instructions to visit our website to view/print your product manual. So often these materials are simply discarded. EarthWay desires to be intentional about reducing our

carbon footprint.

WHAT IS NOT CHANGING?

1. Our desire to hear your feedback and continuously improve our products.
2. Made in the USA
3. The hopper size, spread accuracy, nor quality of this unit is being altered with these product updates. EarthWay considers these improvements as part of our desire have our products be easier use and highly productive for our customers.
