

HYDRO-MAX

USING NATURE'S POWER-OVERRIDING BENEFITS FOR THE ENVIRONMENT

- Based on *Yucca schidigera* – the highest-yielding source of steroidal saponins
- A natural wetting agent
- Faster penetration of difficult soils
- No salt build-up in soil
- A natural food source for nitrogen-fixing bacteria
- Increases water and fertilizer penetration
- Softens hard, compacted soils
- Effective sticker/spreader
- Both Yucca and Humates help leach salts from soils
- Alleviates dry spots
- Reduces surface tension of water

All Natural Wetting Agent Plus Humic Acid

Hydro-Max is a natural wetting agent and soil penetrant derived from the Mohave Yucca plant. This unique desert plant contains the active ingredient steroidal saponins that is a natural wetting agent. Yucca provides a wide range of multi-functional benefits to both plants and soil conditions. Hydro-Max can be mixed with N-P-K fertilizers to improve foliar nutrient absorption. It is compatible with all liquid and soluble fertilizers, herbicides, pesticides, fungicides, and absorbent gels. It is an environmentally friendly product that can be applied to all plant materials either as a soil or foliar application. It is non-phytotoxic and can even be applied during hot, dry weather conditions.

BENEFITS TO PLANT PHYSIOLOGY

- Powerful plant stress reliever
- Increases cell wall permeability
- Speeds up and increases seed germination
- Enhances penetration of macromolecules through cell membranes
- Improves turf survival during climatic stress
- Helps increase root mass and repair damaged roots
