	<b>TREES WITH TWO OR MORE TRUNKS:</b> Measure distance (in inches) around each tree trunk and add together. Multiply this total by 0.75 to get the required number of ounces of MONTEREY ONCE A YEAR INSECT CONTROL to apply. Example: A tree has 4 trunks. They measure, 20, 10, 5 and 5 inches or a total of 40 inches – 40 x 0.75 = 30 ounces.
	<b>SHRUBS:</b> Measure the height of the shrub to the nearest foot. Round any inches down to the nearest foot if less than 6" and up to the nearest foot if greater than 6". <b>FOR BEST RESULTS</b>	<p>Use this product as part of an overall tree and shrub health care program before problems start (preferably in the fall). However, MONTEREY ONCE A YEAR INSECT CONTROL can be applied any time, except when the ground is waterlogged or frozen. These conditions inhibit the movement of the product down into the root zone.</p> <p>During prolonged dry periods, water the tree/shrub well the night before making an application.</p> <p>For severe infestations, treat with a foliar insecticide labeled for use on ornamentals, then use MONTEREY ONCE A YEAR INSECT CONTROL as part of a routine care program.</p>
<b>HOW MONTEREY TREE &amp; SHRUB DRENCH WORKS</b>	The insecticide dissolved in water moves down through the soil, where it is absorbed by the roots. Once absorbed, it moves up through the tree or shrub providing year-long insect protection. MONTEREY ONCE A YEAR INSECT CONTROL even moves into new growth after application, thus protecting it too. To get complete protection, the insecticide must distribute completely through the tree/shrub. Depending on the size and health of the plant, this may take one week to three months (for very large trees). Rain or water cannot wash off this internal protection.
