Product Description

Nutricote® is manufactured by coating nitrate compound fertilizers with a special resin. The duration of releasing nutrients is controlled by the composition of the resin and the quantity of a special "chemical release agent" added to the resin. The special release agent has resulted in a dramatic technological improvement in the consistency and precision of nutrient release.

The composition of Nutricote's resin, and the release controlling agent added to it, produce molecular passageways in the coated resin in a maze-like structure. When Nutricote® is applied to the soil, the water in the soil enters the granule through the passageways and dissolves the nutrients. The nutrient solution will then be control released steadily through the same passageways.

Other slow release fertilizers depend on the thickness of their resin coating to control the release period. This results in a wide variation in particle size and a dependence on the physical properties of the granule for consistent release. It limits the range of release periods available and also contributes significantly to the weight and cost of the product.

Features

- 100% Controlled Release Homogenous Fertilizer
- Coating Technology Provides Predictable Release
- Coating Designed to Release in 360 Days
- Total Package of N-P-K and Micros in Every Prill
- Water Soluble Micro-Nutrients in Every Prill
- High Percentage of Nitrate Nitrogen

Recommended For Use On

Flowering Ornamentals

Palms

Foliage

Liners

Containerized Trees

Ferns

Benefits

- Consistent and Dependable Performance
- Will Not Flash Release
- Matches Longevity to Crop Cycle
- Uniform Crop Quality in Size & Color
- Maximizes Nutrient Uptake
- No Urea/NH4 Conversion - Reduces Burn Potential

Ideal Growth Locations

360 DAYS

Your Local Distributor
