

## Instructions for adjusting watering pattern:

Refer to Illustrations 1 and 2.

### Illustration 1 – Spray Pattern and Distance Coverage:

Distance coverage can be adjusted and spray pattern altered by any one of the following adjustments.

Turning the water pressure up or down at the faucet:

Turning the diffuser pin **(E)** clockwise to intersect the water stream results in a gentle misty spray pattern. (For newly seeded lawns)

Turning the deflector **(F)** down to meet the water stream, will result in lower spray patterns. (For under trees)

### Illustration 2 – Full or Part Circle Coverage:

This sprinkler adjusts to water a full circle or any segment from 30° to 360°.

For full circle watering coverage: Flip wire clip in "Up" position **(A)**

For part circle watering coverage: Wire clip stays in "Down" position **(B)** and should be between collars (see Illustration 2). Rotate the upper and lower collars **(D)** to achieve the desired area of coverage **(C)**.
